## $5^{\text {th }}$ Grade Math

Module 2: Multi-Digit Whole Number and Decimal Fraction Operations

## Math Parent Letter

This document is created to give parents and students a better understanding of the math concepts found in Eureka Math (© 2013 Common Core, Inc.) that is also posted as the Engage New York material which is taught in the classroom. Grade 5 Module 2 of Eureka Math (Engage New York) covers MultiDigit Whole Number and Decimal Fraction Operations. This newsletter will discuss Module 2, Topic D.

Topic D. Measurement Word Problems with Whole Number and Decimal Multiplication

## Words to know

- millimeter (mm)
- centimeter (cm)
- kilometer (km)
- inch (in)
- foot/feet (ft)
- $\quad$ yard (yd)
- mile (mi)
- $\quad \operatorname{cup}(\mathrm{c})$
- $\quad$ pint ( pt )
- quart (qt)
- gallon (gal)
- milligram (mg)
- gram (g)
- kilogram (kg)
- ounce (oz)
- $\quad$ pound ( lb )
- ton
- fluid ounce (fl oz)
- $\quad$ liter (L)
- milliliter (ml)
- kiloliter (kl)
- unit

## Things to Remember!!!

- When converting bigger unit to smaller unit, you multiply by the bigger unit by whole number of smaller units.

## Objectives of Topic D

- Use whole number multiplication to express equivalent measurements.
- Use decimal multiplication to express equivalent measurements.
- Solve two-step word problems involving measurement and multi-digit multiplication.

## Focus Area- Topic D

Measurement Conversions through multiplication

## Knowing the unit conversions

| 1 foot $=12$ inches | 1 yard $=3$ feet $=36$ inches |
| :--- | :--- |
| 1 mile $=5,280$ feet | 1 mile $=1,760$ yards |

1 centimeter $=10$ millimeter
1 meter $=100$ centimeters $=1,000$ millimeters
1 kilometer $=1,000$ meters
1 pound $=16$ ounces
1 ton $=2,000$ pounds
1 gram $=1,000$ milligrams
1 kilogram = 1,000 grams
1 cup= 8 fluid ounces
1 pint $=2$ cups
1 quart $=2$ pints
1 gallon $=4$ quarts
1 kiloliter $=1,000$ liters

Convert.
a. $\quad 15 \mathbf{y d}=$ $\qquad$ ft
yards to feet: big unit to small unit - multiply
$3 \mathbf{f t}=1 \mathbf{y d} \quad 15 \mathbf{y d} \times 3 \mathbf{f t}$ per $\mathbf{y d}=45 \mathbf{f t}$
b. $\quad \mathbf{g}=18 \mathbf{k g}$
kilograms to gram: big unit to small unit - multiply $1,000 \mathbf{g}=1 \mathbf{k g} \quad 18 \mathbf{k g} \mathbf{x} 1,000 \mathbf{g}$ per $\mathbf{k g}=18,000 \mathbf{g}$
c. $16 \mathrm{gal}=$ $\qquad$ $\mathbf{q t}=$ $\qquad$ pt
gallons to quarts to pints: big unit to small unit to smaller unit - multiply twice
$4 \mathbf{q t}=1 \mathbf{g a l} \quad 1 \mathbf{q t}=2 \mathbf{p t}$
16 gal x 4 qt per gal $=64$ qt
$64 \mathbf{q t} \times 2 \mathbf{p t}$ per $\mathbf{q t}=128 \mathbf{p t}$
d. $\qquad$ $\mathbf{f l ~} \mathbf{o z}=6.32 \mathbf{c}$
cups to fluid ounces: big unit to small unit -multiply
$8 \mathbf{f l ~ o z}=1$ cup
6.32 c x 8 fl oz per c
$=632$ hundredths $\mathbf{c} \times 8 \mathbf{f l} \mathbf{~ o z}$ per $\mathbf{c}$
$=5056$ hundredths fl oz
$=50.56 \mathrm{fl} \mathrm{oz}$
e. $\quad 9.54 \mathbf{g}=$ $\qquad$ mg
grams to milligrams: big unit to small unit - multiply
$1,000 \mathrm{mg}=1 \mathrm{~g}$
$9.54 \mathrm{~g} \times 1000 \mathrm{mg}$ per g
$=954$ hundredths $\mathbf{g} \times 1000 \mathbf{m g}$ per $\mathbf{g}$
= 954,000 hundredths $\mathbf{~ m g}$
$=9540.00$ or 9540 mg

John's dog had 5 puppies! When John and his sister Peggy weigh all the puppies together, they weigh 4 pounds 1 ounce. Since all the puppies are about the same size, how many ounces does each puppy weigh?

Answer: First, we need to put all of the puppies' weight in the same units. We are looking for a final answer of ounces. So, we are converting from pounds to ounces: big unit to small unit - multiply. 16 ounces $=1$ pound

$$
\begin{aligned}
& 4 \text { pounds } \times 16 \text { ounces per pound }=64 \text { ounces } 64 \text { ounces }+1 \text { ounce }=65 \text { ounces } \\
& \qquad 65 \text { ounces }=5 \text { puppies weight in ounces }
\end{aligned}
$$

| 65ounces |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { ? } \boldsymbol{o z} \\ \text { (weight of } p u p p y \text { ) } \end{gathered}$ | ? $\boldsymbol{o z}$ <br> (weight of puppy) | ? $\boldsymbol{o z}$ <br> (weight of puppy) | $\begin{gathered} \text { ? oz } \\ \text { (weight of puppy) } \end{gathered}$ | $\begin{gathered} ? \boldsymbol{o} \boldsymbol{o z} \\ \text { (weight of } p u p p y \text { ) } \end{gathered}$ |

$$
\begin{array}{lr}
\text { 65ounces } \div 5 \text { puppies }=13 \text { ounces } & 5 \begin{array}{r}
13 \\
\hline
\end{array} \begin{array}{r}
65 \\
\hline-5 \downarrow \\
\text { Each puppy weighs } 13 \text { ounces. } \\
\end{array} \quad-\frac{15}{0}
\end{array}
$$

Susan is training to be in the Mrs. Fitness contest. She ran 3.75 km , swam 0.76 km , and biked for 23.2 km . Susan completed this routine three times a week. How far did Susan travel in one week while training? Express your answer in meters.

Answer: First, we will convert from $\mathbf{k m}$ to $\mathbf{m}$ : big unit to small unit - multiply. $1,000 \mathrm{~m}=1 \mathrm{~km}$

Susan traveled a total of 83,130 meters in one week of training.

| Another Approach: | 3.75 km |
| :---: | :---: |
| 0.76 km |  |
| $\frac{23.20 \mathrm{~km}}{27.71 \mathrm{~km} \boldsymbol{x}} 1000 \mathrm{~m}$ per $\mathbf{~ k m}=27,710 \mathrm{~m}$ |  |$\quad$| $27,710 \mathrm{~m}$ |
| :---: |
| (trainings in a week) |
| $83,130 \mathrm{~m}$ (total distance in one weeke of training) |

Fast Mail charges $\$ 5.35$ to ship a $2 \mathbf{l b}$-package. For each ounce over $2 \mathbf{l b}$, they charge an additional $\$ 0.18$ per ounce. How much would it cost to ship a package weighing $3 \mathbf{l b} 8 \mathbf{o z}$ ?
Answer: First we need to see how many 2 pounds can be taken out of the total weight of the package

Now we need to convert our packages left over weight into the same unit of ounces.

$$
\left\{\begin{array}{l}
3 \mathrm{lb} 8 \boldsymbol{o z} \text { (weight of package) } \\
-2 \mathbf{l b} 0 \boldsymbol{o z}(\$ 5.35-\text { cost for shipping } 2 \mathrm{lb}) \\
1 \mathrm{lb} 8 \boldsymbol{o z} \text { (left over weight) }
\end{array}\right.
$$

Convert pounds to ounces: big unit to small unit (multiply) $16 \boldsymbol{o z}=1 \mathbf{l b}$

$$
432 \div 100=4.32
$$
