PFK - phosphofructokinase AP allosteric enzyme (chaye bhapc)

- Catalyzes Glycolysis

ATP. acts as allosteric inhibitor of PFF
ATP attackes to PFK - Chanjing its shape stopeng Glycolysis
ATP levels Rise Hycolysis slows
ATP levels drop -ATP Releasod fromPFK and Glydybs incrases

Alcohol Fermentation Yeast Beatriz

Lactic Acid

Acrobic Raspiration

Aerobic Respiration

Energy Yield (per Glucose)

Imeretant - pot all manual casual hes to got make ATP it way be used far organ Construction.
